

True explanation

Marco should start with the rollers and while Polo is walking he goes to half an hour and leaves the rollers halfway. Then he walks for two hours while Polo arrives halfway and takes the rollers. This way they both employ 2 hours and a half to reach Khan's house.

Creative explanation

Easier each guy could put on a roller on his left foot for Polo, and on the right one for Marco. Holding themselves they employ 2 hours to reach Khan's house, going at 10km/h because of the double weight.
